Hobby Servo vs. Industrial Servo Systems Both hobbyists and industrial companies use "servos", but they are quite different in their components and applications. We use both extensively, depending on the best fit for the project. ... control onto the standard PWM command signal, in an effort to use more of the available bandwidth to accomplish

A battery box connected to the velocity drive input can be used to operate the servo drive independently of the control. By operating the velocity drive back and forth and putting step changes in input voltage to the drive, the servo performance can be observed for stability.

RC servos are used to provide actuation for various mechanical systems such as the steering of a car, the control surfaces on a plane, or the rudder of a boat. Due to their affordability, reliability, and simplicity of control by microprocessors, they are often used in small-scale robotics applications.
