The properties of Laplace and Fourier transforms, given in this section, help a lot by adding to the repertoire on the transforms. Whereas the linearity helps in using superposition, the unique

The specific Fourier and Laplace transform being used may differ from application to application. For electrical networks the Fourier and Laplace transforms are applied to functions describing a current or voltage as function of time.

Abstract: This paper makes an attempt consolidated and of comparative study of Fourier Transform, Laplace Transform and z- transform. It also shows sequential mathematical flow of interlinking of the three transforms.

Relation between Fourier and Laplace Transforms If the Laplace transform of a signal exists and if the ROC includes the  $j\omega$  axis, then the Fourier transform is equal to the Laplace transform evaluated on the  $j\omega$  axis. Laplace transform:  $\hat{X}(s) = \int_{-\infty}^{\infty} x(t) e^{-st} dt$  Fourier transform:  $\hat{X}(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt = X(s)|_{s=j\omega}$  ...
