Ch. 1: Introduction of Mechanical Vibrations Modeling Spring-Mass Model Mechanical Energy = Potential + Kinetic From the energy point of view, vibration is caused by the exchange of potential and kinetic energy. When all energy goes into PE, the motion stops. When all energy goes into KE, max velocity happens.

In Chapter 6, the linear theory of vibration systems that have more than one degree of freedom is presented. The equations of motion are presented in a matrix form, and the case of damped and undamped free and forced vibration, as well as the theory of the vibration absorber of undamped and damped systems, are discussed.
