C. Deparaffinization Before proceeding with the staining protocol, the slides must be deparaffinized and rehydrated. Incomplete removal of paraffin can cause poor staining of the section.

IHC-PARAFFIN PROTOCOL (IHC-P) - abcam.com

1. Theory. Fixation: There are four general procedures for tissue fixation; snap freezing, OCT media embedding, RNA stabilizing reagent, or fixative. This protocol will focus on formalin fixation since it is the most common. There are multiple solutions that can be used for fixation of tissues, including Bouin's Fixative, paraformaldehyde, and neutral-buffered formalin.

Renal cell carcinoma (RCC) is a kidney cancer that originates in the lining of the proximal convoluted tubule, a part of the very small tubes in the kidney that transport primary urine. RCC is the most common type of kidney cancer in adults, responsible for approximately 90-95% of cases. Initial treatment is most commonly either partial or complete removal of the affected kidney(s).

Fixation is the foundation step behind the study of pathology and essentially exists to prevent the autolysis and degradation of the tissue and tissue components such that they can be observed both anatomically and microscopically following sectioning.

Tissue fixation and the effect of molecular fixatives on

Magnetic water softening and scale control. There is a long history of the promotion of magnets to alleviate the "hardness" of mineral-containing waters, and particularly to control the deposition of scale in teapots, plumbing systems, evaporators, and boilers.

Risk is the possibility of losing something of value. Values (such as physical health, social status, emotional well-being, or financial wealth) can be gained or lost when taking risk resulting from a given action or inaction, foreseen or unforeseen (planned or not planned). Risk can also be defined as the intentional interaction with uncertainty. ...
