The fundamental concept underlying the geometry of curves is the arclength of a parametrized curve.

Definition. If $\gamma: [a, b] \rightarrow \mathbb{R}^3$ is a parametrized curve, then for any $a < t < b$, we define its arclength from $t = a$ to $t = b$ to be $s = \int_a^b \|\gamma'(t)\| dt$. That is, the distance a particle travels—the arclength of its trajectory—is the integral of its speed.
